December 13, 1982

Commodity Supply Estimates Raised; U.S. Grain, Cotton Exports Reduced

Upward revisions in global crop estimates have pushed supplies above a month ago, while lagging demand continues to reflect depressed economic conditions in a number of countries. With this month's increase in crop supplies abroad and weak worldwide demand, estimated 1982/83 U.S. exports have been lowered and stock estimates increased for wheat, rice, corn, sorghum, barley, and cotton. Export prospects have improved for soybeans and soybean meal.

Global stocks of grains, soybeans and cotton are projected to increase during 1982/83. Most of the increase is expected to be in the United States, where record stock levels are indicated for wheat, rice, feedgrains and soybeans.

Domestic demand for animal products has been further weakened by poor consumer demand stemming from the lagging U.S. economy. At the same time, U.S. poultry product exports are being hurt by both weak consumer demand abroad and by intense competition from other suppliers. U.S. animal product prices this fall also have come under additional pressure from larger-than-expected levels of cattle and hog slaughter.

U.S. Wheat Export Prospects Diminish; Stocks To Increase

The U.S. wheat export estimate has been lowered 50 million bushels (1.4 million tons) to 1.6 billion bushels (43.5 million tons) due to lagging export sales and higher export estimates for a number of major foreign exporting countries. Carryover stocks of U.S. wheat in 1982/83 are projected at a record 1.51 billion bushels (41.1 million tons), 30 percent above a year earlier. Three-fourths of the projected carryover will be in the farmer-owned reserve and government inventory.

The 1982/83 foreign wheat production estimate was increased 2 percent since last month, with increases for both major exporting and major importing countries. World wheat use in 1982/83 is likely to be up significantly for the first time since 1979/80, but will still fall short of production. Global wheat stocks are likely to increase from 81 million tons in 1981/82 to a projected 94 million in 1982/83, with the U.S. accounting for more than 70 percent of the increase.

See individual commodity table for treatment of export/import imbalances. 3/ Includes wheat coarse grains, and milled rice.

U.S. Feed Grain
Export Estimate Lowered

Weaker world trade prospects and increased export availabilities in foreign exporting countries have resulted in a 2.1-million-ton reduction in the 1982/83 U.S. feed grain export estimate. Projected exports of 61 million tons are up 5 percent from 1981/82, but are down nearly 15 percent from the record 1979/80 level. Since last month, export forecasts have been lowered 50 million bushels (1.3 million tons) for corn, 15 million (0.4 million tons) for sorghum, and 20 million (0.4 million tons) for barley.

U.S. corn carryover stocks in 1982/83 are now expected to reach 3.5 billion bushels (88.8 million tons), up nearly 50 percent from 1981/82. The farmer-owned reserve estimates for corn and sorghum have been raised 150 million and 50 million bushels, respectively, reflecting weaker export prospects, and expected continued heavy placements during the next several weeks. U.S. feed grain carryover stocks in 1982/83 are projected at 108 million tons, with the farmer-owned reserve at around 70 million.

Farm prices of corn have improved slightly since the beginning of the marketing year, but for the season are likely to average below the \$2.45 a bushel received for the 1981 crop. In 1982/83, corn prices are forecast between \$2.15-\$2.35 a bushel, unchanged from the previous forecast.

Prospects for larger crops in the Southern Hemisphere, and upward revisions of production estimates for Canada and Western and Eastern Europe, have boosted the 1982/83 world coarse grain production estimate by 5 million tons since November. Global use is likely to be up 3 percent from 1981/82, with most of the increase in the major importing countries. While foreign stocks are expected to decline modestly in 1982/83, the substantial buildup in U.S. stocks will boost world coarse grain stocks to a projected record 148 million tons, 34 million above 1981/82.

U.S. Rice Exports Expected
To Fall Sharply in 1982/83

U.S. rice exports in 1982/83 are projected at 69 million cwt (2.25 million tons-milled basis), more than 15 percent below last month's forecast and 1981/82 exports. Lagging export sales and shipments are the main reasons for the decline in the forecast in the past month. U.S. rice carryover stocks for 1982/83 are expected to total a record 61 million cwt up one fourth from 1981/82. Government inventory of rice in 1982/83 is projected at 44 million cwt, 25 million higher than a year earlier. Farm prices of U.S. rice for the 1982 crop are likely to average slightly below the \$8.14 per cwt loan rate, with a range of \$7.50-\$8.25.

Despite improved prospects for China's rice crop, 1982/83 world rice production continues to be projected down 3 percent from the record 1981/82 harvest. Global use is also likely to fall in 1982/83, primarily due to a drop-off in utilization in India because of the poor harvest. However, world use is forecast to exceed production, leading to a 5-million-ton decline in carryover stocks to 17 million.

Accelerated Protein Meal Use By Soviets
To Spur World Soybean Crush and Trade

World use of soybean meal is forecast at 63 million metric tons, up 1.4 million from a month earlier, and 4.4 million above 1981/82. The Soviet Union accounts for most of this month's upward revision with soybean meal use forecast to reach 4.3 million tons, nearly 90 percent higher than year-ago levels. Increased Soviet soybean meal use is based on indications that the USSR has already purchased at least 2.7 million tons from South America and Western Europe. Soybean meal imports by the Soviets are, therefore, forecast at 3.0 million tons, up 1.8 million from 1981/82 and double month-ago indications.

World soybean crush in 1982/83 is forecast at 78.9 million tons, up 1.0 million from last month and 5.0 million from 1981/82. Upward revisions of 0.4 million tons for the European Community, primarily the Netherlands, and 0.3 million in the United States account for most of the larger crush indications. In the United States, crush is forecast to reach 29.9 million tons (1,100 million bushels); up 0.3 million from last month. A 0.2-million-ton increase in U.S. soybean meal exports to 7.3 million tons (8.1 million short tons) supports the larger crush forecast.

World soybean meal exports are forecast at 22.6 million tons, up 1.3 million tons from a month ago and 2.0 million over 1981/82. The European Community is expected to export the largest portion of this month's indicated increase, although larger meal exports are forecast for the United States and Brazil.

World stocks of soybean oil are forecast at 1.6 million tons, up 0.2 million from last month and slightly above year-earlier levels. Larger soybean oil stocks are a result of the increased meal demand and crush; this is likely to add slight additional downward pressure on soybean oil prices which are forecast at \$350-\$440 a ton (16-20 cents a pound).

With larger U.S. soybean exports and crush indicated this month, soybean carryover stocks are forecast at 11.7 million tons (430 million bushels), down 0.5 million tons from last month. Although some slight strengthening in season average prices may occur, the price forecast remains between \$190-\$210 a ton (\$5.25-\$5.75 a bushel) the same as a month earlier. Soybean meal prices are expected to run stronger than indicated last month with prices forecast at \$175-\$200 a metric ton (\$160-\$180 a short ton).

Weak Demand Continues To Depress
Livestock and Poultry Prices

U.S. livestock and poultry prices have been lower than anticipated this fall. Consumer purchasing power and confidence have been constrained by high levels of unemployment and shorter work weeks; the result has been weaker demand for livestock and poultry products. Sharp cuts in broiler and egg exports also have contributed to weaker prices for these products.

Red meat output has been larger than expected. Beef production is being bolstered this fall by larger-than-anticipated beef cow slaughter. Low returns to beef cow-calf producers and the current poor financial situation have many farmers and ranchers selling breeding stock to meet cash flow needs. Despite the depressed fed-cattle prices, low feed costs combined with weak feeder cattle prices have generally yielded positive returns for cattle feeders. These positive returns and poor grazing conditions this fall in the major wheat grazing regions have prompted larger than expected placements of cattle on feed. This will boost first-half 1983 beef production above earlier expectations. But since heifers account for most of the increase in placements, production may not rise as much as suggested by the larger number of feedlot placements.

Pork production also has been larger than expected this fall. Available data continue to suggest that producers are not significantly building breeding inventories. If, in fact, they are not building breeding inventories it would partially explain the larger than anticipated output. The Hogs and Pigs report to be released December 22 will provide a better basis for assessing the pork supply outlook.

Turkey prices have recently dropped sharply, suggesting that retail purchases of turkeys for Thanksgiving were lower than expected. The weaker prices are expected to carry over into 1983 as consumer purchasing power remains weak and the seasonally strong demand period for turkeys passes.

The egg market is much weaker than expected. Not only has the seasonal December price rise failed to materialize, but egg prices have actually declined since Thanksgiving. Without this normal seasonal rise, egg prices are expected to remain low into 1983, particularly with egg exports likely to continue sharply lower and weak domestic demand expected to persist. The egg price forecast has been lowered and if these prices prevail, producers will be in a loss situation. This would likely result in a lower level of egg output in 1983 than previously forecast.

World Cotton Stocks Continue to Build

This month's assessment of the world cotton outlook for 1982/83 points to production moderately in excess of mill use with stocks continuing to build. Record yields are boosting output to an estimated 68.2 million bales, one million above the November indication. Global consumption is forecast at 66.6 million bales, near month-earlier prospects. Consequently, this season's ending stocks now are placed at 29.5 million bales, about one million above a month ago and 1.5 million above the beginning level.

The United States is burdened with most of this season's prospective surplus in world cotton stocks. By the end of 1982/83, the U.S. carryover may total 8.0 million bales, 0.5 million above the month-earlier indication and sharply above the carryin. The increase reflects weak demand in the face of surprisingly large production of 12.1 million bales. While mill use may only slightly top last season's 50-year low of 5.3 million bales, exports are

expected to total about 5.4 million, sharply below 1982/83's 6.6 million. Relatively poor export prospects are the result of diminished import demand by China because of record production there as well as sluggish textile activity in major importing countries in the Far East and Western Europe.

A close balance between supply and demand continues to highlight the foreign cotton outlook for 1982/83. Production is estimated at a record 56.1 million bales, 0.8 million above month-earlier prospects, primarily reflecting larger production in China and Brazil. Prospective consumption remains unchanged from last month at 61.1 million bales. This season's ending stocks are placed at 21.5 million bales, near the year-earlier level.

Cotton trade prospects for 1982/83 continue to slip. With smaller import needs by China, world imports are estimated at 17.6 million bales, 0.5 million below the November indication, and the smallest since 1974/75. So, with reduced import demand, global exports are off over a tenth at 17.6 million bales. U.S. exports may drop nearly one-fifth from last season. The U.S. share of world trade is expected to decline slightly, reflecting generally less competitive prices in international markets.

Nov. proj.	692	441	58	130	140	1,461
Dec. proj.	717	441	68	140	145	1,511

1/ Marketing year beginning June 1. 2/ The "probable variation" reflects the root mean square error and/or standard error of estimate from trend and judgment. Chances are about 2 out of 3 that the outcome will fall within the implied ranges. 3/ Includes flour and products in wheat equivalent. 4/ Total supply includes imports.

Milling rate (%)	73.0	72.1	72.0	72.0

1/ Marketing year beginning August 1. 2/ The "probable variation" reflects the root mean square error and/or standard error of estimate from trend and judgment. 3/ Consolidated supply and disappearance of rough and milled rice. Milled rice data are converted to a rough rice basis using annually derived milling rates as factors. 4/ Results from losses in drying, storage, handling, and milling and errors in estimation.

Dec projection	: 1.54	13.92	3.53	13.77	3.63

1/ Data based on local marketing years except for Argentina and Brazil which are adjusted to an October-September year. 2/ Major exporters include Brazil and Argentina. 3/ World imports and exports will not balance due to differences in local marketing years and to time lags between reported exports and imports. Therefore, world supply may not equal world use.

Use, total	:	2.57	2.57	2.44
Dif. unactd. 5/	:	.09	.02	.02
Ending stocks	:	.59	1.44	1.63
Avg. farm price 6/	:	1.65	1.21 7/ 8/	8/

1/ Marketing year beginning Aug. 1. 2/ The "probable variation" reflects the root mean square error and/or standard error of estimate from trend and judgment. Chances are about 2 out of 3 that the outcome will fall within the implied ranges. 3/ Based on Bureau of the Census data. 4/ Includes imports. 5/ Difference between ending stocks based on Bureau of Census data and preceding season's supply less distribution. 6/ Season average farm price, domestic measure, cents per pound; metric measure, dollars per kilogram. 7/ Weighted average for the first eight months of the marketing season; not a projection for 1981/82. 8/ USDA is prohibited from publishing cotton price projections.

Note: Totals may not add due to rounding.

The World Agricultural Supply and Demand Estimates were approved by the Interagency Commodity Estimates Committees for:

FEED GRAINS: Paul Meyers, Chairman, WAOB; Jim Parker, FAS; Orville I. Overboe, ASCS; Ralph Tapp, AMS; Sam Evans, ERS.

WHEAT: Paul Meyers, Chairman, WAOB; Jim Parker, FAS; David Spalding, AMS; Randeil Weber, ASCS; Sam Evans, ERS.

RICE: Paul Meyers, Chairman, WAOB; Tom Slayton, FAS; David Spalding, AMS; George Schaefer, ASCS; Sam Evans, ERS.

SOYBEANS, COTTONSEED AND OILS: Jim L. Matthews, Chairman, WAOB; Alan E. Holz, FAS; Sam Evans, ERS; David Spalding, AMS; Louise Lynch, ASCS.

DAIRY: James Nix, Chairman, WAOB; Bryant Wadsworth, FAS; Charles Shaw, ASCS; Robert R. Miller, AMS; Clifford Carman, ERS.

MEAT ANIMALS: James Nix, Chairman, WAOB, Bryant Wadsworth, FAS; Charles Shaw, ASCS; David Spalding, AMS; Ron Gustafson, ERS.

POULTRY: James Nix, Chairman, WAOB; Bryant Wadsworth, FAS; Charles Shaw, ASCS; Jack Ross, AMS; Allen Baker, ERS.

COTTON: Russell G. Barlowe, Chairman, WAOB; Gordon Lloyd, FAS; Carol Skelly, ASCS; Loyd Frazier, AMS; Sam Evans, ERS.

The World Agricultural Supply and Demand Estimates report draws on information from USDA's global network of agricultural attaches and counselors, commodity analysts, and country regional specialists.
